

Hi! Welcome, and thank you for purchasing my product.

My name is Hassan, and today I'll guide you step by step through setting up your agent in n8n. If you get stuck at any point, don't worry—feel free to reach out to me at hassankhaleeq388@gmail.com. Let's get started!

accounts you need for setup:

- 1) sign in to n8n
- 2) sign in to Vapi for voice agent
- 3) sign in to pinecone (for rag setup so when user ask any question related menu it can answer from menu which we will store in pinecone)
- 4) sign in to wassenger (for sending confirmation to customer via WhatsApp)
- 5) sign in to one drive (where we will upload our pdf of menu)
- 6) sign in to twillo (for getting number so user can dial number for ordering things)

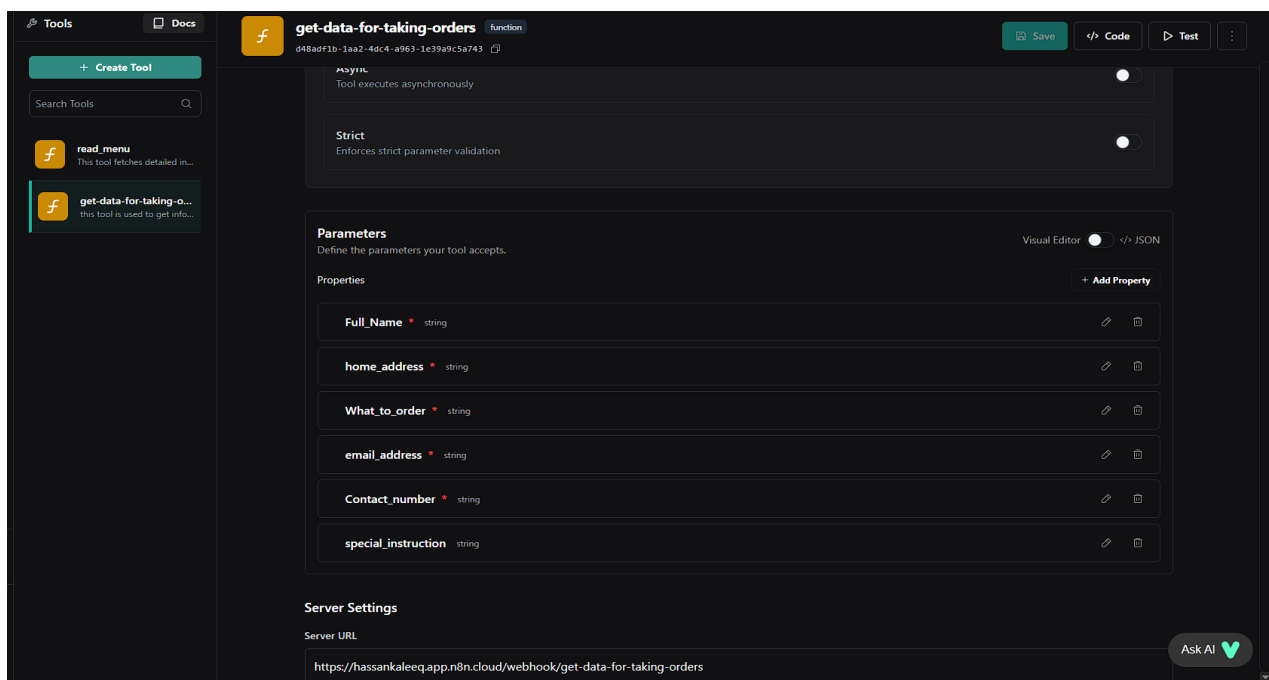

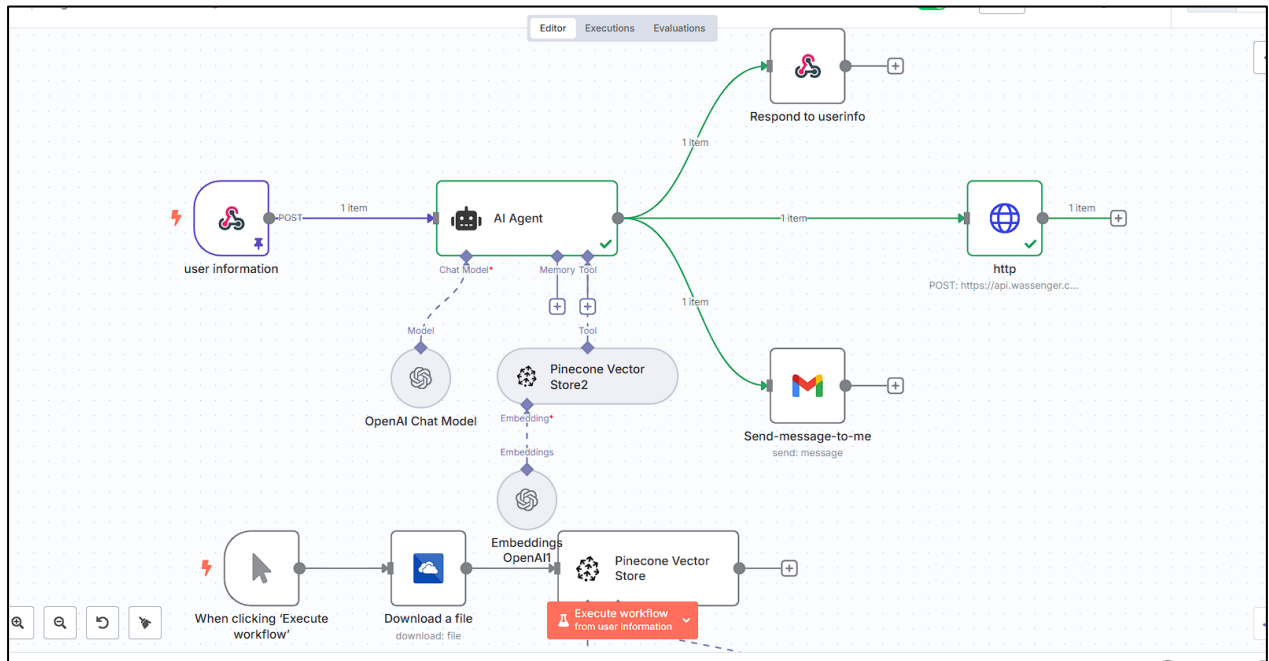

****API keys you need ****

1. Vapi Api key
2. OpenAI
3. Wassenger
4. twillo

Note: if you don't know how to get Api of these no worries, I will explain this in guide later when we will actual setup this

rough idea of workflow that how it will work so you can easily setup:

(N8n + vapi screen shots)

Workflow Overview: How the AI Order System Works

1. User Interaction via Phone:

The process starts when a user dials a Twilio number from their phone dial pad. The call is picked up by **Vapi**, which then asks the user a series of questions, such as:

- What would you like to order?
- Your full name?

- c. Contact number?
 - d. Home address?
 - e. Any special instructions?
- 2. **Sending Data to n8n:**

Once Vapi collects all the necessary information, it sends the user's data to the **user information webhook** in n8n.
- 3. **AI Agent Summary:**

The data is passed to the **AI Agent node** in n8n. This node processes the details and generates a summarized version of the customer's order.
- 4. **Response to Vapi:**

The summarized order is then sent to the **Respond to user info** webhook, which allows Vapi to tell the customer something like:
"Thank you! Your order has been placed for [order details]..."
- 5. **Owner Confirmation:**

As seen in the workflow, the **Send-message-to-me** node receives input from the AI Agent. This node sends a message to the business owner with a confirmation of what the customer has ordered.
- 6. **Customer Confirmation via WhatsApp:**

The **HTTP node** sends a request to the **Wassenger API**, which then delivers a confirmation message directly to the customer on WhatsApp.

****Setup workflow in n8n*(importing Json file in n8n)***

1. Download the zip file and extract/unpack
2. After extracting it look for file named ***ai agent for restaurants (json)***
3. In n8n create a new workflow(personal)
4. Now look for the three dots in the top-right corner. Click on them, then select "Import from File."
5. Find the JSON file named "AI Agent for Restaurants" where you saved it and click "Import."

6. After importing, you'll see that your workflow has been successfully loaded. Congratulations! 🎉

Set Up Pinecone (For RAG Menu Answering)

1. Go to <https://www.pinecone.io> and log into your account.
2. Create a **new index** (you can name it restaurant-menu)
 - a. Dimensions: 1536
 - b. Metric: cosine
3. Copy your **API key** and **environment** — we'll use them inside the n8n workflow.
4. Upload your **menu PDF** to OneDrive or get it through the n8n **Download File node**.
5. This PDF will be embedded using OpenAI and stored in Pinecone so the AI agent can answer any customer queries like:
"Do you have spicy wings?" or "Is there any vegetarian pizza?"

Note : if you dont know how to setup rest of these things like vapi+twillo then no worries just ask me via email i will explain you and provide video tutorial if needed
